Insertion Sort

The insertion sort algorithm iterates through an input array and removes one element per iteration, finds the place the element belongs in the array, and then places it there. This process grows a sorted list from left to right.

- Worst Case: $O(n^2)$

Input Size(n)	Execution Time(sec)

Merge Sort

Merge Sort is a Divide and Conquer algorithm. It divides the input array into two halves, calls itself for the two halves and then merges the two sorted halves.

- Worst Case : O(nlogn)

Input Size(n)	Execution Time(sec)
